

# SOLAR-RIPP®

Solar Pool Heater

20 Years  
Quality

Lubricate the spigots on the headers as you go with **washing up liquid**, and push the lengths of flexible collector hose onto the spigots and lay them in place into the pipe clips.

 red dot design award  
winner 2009

The manifolds are made of thermoreactive flexible material which may result in these tubes settling in a slightly curved position. If, for estetical reasons, you need the manifolds to be totally straight this can be achieved by "splinting" the tubes to a wooden bar or a metal tube etc. with cable ties or similar. Our new aluminum carrier system with up to 3m long aluminum profiles is ideally suited.
